Task: made 3 form Project Specific Detail Format (Annexure-1), Undertaking, Annexture2 with strict restriction of no special char allowed

Work Done:
- : - Developed Project Specific Detail Form (Annexure-1) using React Hook Form and Zod
- - Implemented field-level validations (alpha, alphanumeric, mobile, numeric) - Added date validation (end date "e start date) - Enforced synopsis word limit with live word counter - Structured form into logical sections for better usability
- - Built Undertaking Form with download !' fill !' upload flow
- - Embedded PDF preview with print/save restrictions - Implemented file upload validation (type & size) - Added client-side preview for uploaded files (PDF/Image)
- - Implemented Annexure-2 multi-step application form

- - Designed 4-step form with stepper navigation - Validated step-wise fields before allowing progression - Auto-redirected users to the step containing validation errors - Handled conditional fields, file uploads, and final submission flow

Challenges:
any special char should not go into the backend system

Learnings:
- • Implementing complex form validation using Zod schemas - Managing multi-step forms with controlled navigation- Handling file uploads and previews securely on the frontend also hiding all the options of pdfs just view only mode for pdf just by changing src="/src/Undertaking Form.pdf#toolbar=0&navpanes=0&scrollbar=0"
- • - Structuring large forms using reusable input components

Impact:
- • Converted complex government paper forms into structured, user-friendly digital forms
- • - Reduced chances of invalid submissions through strict client-side validation
- • - Improved user experience by breaking large forms into manageable steps
- • - Forms are scalable and maintainable due to reusable input components

Tech Stack:
- • React, react-hook-form, Zod, Tailwind CSS

Files Touched:
- • ProjectSpecificDetailFormat.jsx , UndertakingForm.jsx, UndertakingForm.pdf, Annexure2Form.jsx

Next Plan:
sended files to both Aditya sir along with pdf also there was few confusion in annexure 2 so in that they will ask the bihar films then update me regarding

Fri Jan 16 2026	Bihar Flims	0 hrs

Task: Build "How to Apply for Film Subsidy" page as per Bihar Film Promotion Policy 2024

Work Done:
- • - Developed a complete React page explaining subsidy eligibility, documents, and application process
- • - Implemented tab-based document sections (Part A / Part B)
- • - Added interactive step-based application process UI
- • - Integrated downloadable PDF links for forms and formats
- • - Structured category-wise guidelines (Film / Web Series / Documentary)
- • - Designed bank details and fee breakdown section

Challenges:
I have to show more than 20+ docs in readable and understandable manner it was where I was struggling how can I show this much data clearly

Learnings:
- • Managing complex UI using multiple React state variables
- • - Structuring large informational pages for better UX
- • - Conditional rendering for tabs and interactive cards

Impact:
- • - Clear, user-friendly subsidy application guide for filmmakers
- • - Reduced dependency on manual explanation by presenting structured information
- • - Page ready for internal review and content validation

Tech Stack:
- • React, Tailwind CSS, lucide-react icons

Files Touched:
- • HowToApplySubsidy.jsx

Next Plan:

Work done just need to setup route by Aditya sir on main code already send the file to Aditya sir and also shown to nishant sir
